

Fresco™ Square Fire Pit Kit with Insert

See back for assembly instructions

Rules for Safe Operation: *Read and understand before assembly and use of fire pit*

- Always use in accordance with all applicable local and state fire codes
- Failure to follow these instructions could result in a hazardous fire causing property damage or physical injury
- Caution: For outdoor use only
- Use the fire pit on stone, dirt or sand surfaces
- For adult use only — do not allow children to use the fire pit
- Do not use on lawns, wooden decks, concrete or asphalt
- Do not use fire pit indoors or under a patio roof
- Do not use in windy conditions
- Do not leave fire unattended at any time
- Do not use under tree branches, trellis, or overhangs of any kind, including covered porches
- Do not use flammable liquids such as gasoline, alcohol, diesel fuel, kerosene, or charcoal lighter fluid to light or relight fires
- Care should be taken to make sure all combustible material is far enough away from the fire pit not to ignite it
- Avoid using softwoods such as pine or cedar because they are likely to throw sparks — hardwoods are recommended
- Keep children and pets away from the fire pit while it is in use
- Exercise the same precautions you would with any open fire
- Do not wear flammable or loose clothing when tending an open fire
- Avoid touching surfaces as they will be extremely hot
- Assure the fire is completely extinguished before leaving fire pit
- Any modifications to this appliance may be dangerous and are not permitted

Materials Needed:

| • Tape Measure | • Shovel | • Tamper | • Lava Rock |
| • Marking Paint (for yards) | • Garden Rake | • Rubber Mallet | |
| • Chalk (for marking patios) | • Level | • Concrete Adhesive | |
| | • Paver Base | • Caulking Gun | |

Fresco™ Square Fire Pit Kit with Insert Assembly Instructions

Always use in accordance with all applicable local and state fire codes

1. If putting your fire pit on a lawn, mark a 3'8" x 3'8" square and remove all sod and roots inside the square. Dig approximately 2 inches deep. If putting your fire pit on a patio, mark the square with chalk and skip ahead to step 4.

2. Check the level of the soil inside the square in all directions. Remove soil from the high spots to bring it close to level.

3. Add 1.5-2 inches of paver base to your square and rake it level. Using a tamper, pack the entire area of paver base until firm. Make sure the surface is level before laying blocks.

4. Start at a corner to place 12 blocks on top of paver base. Lay them tightly together to form the square. Level each block front-to-back and side-to-side. Make sure each block is even with the previously leveled block. Use a rubber mallet to level.

5. After the 1st course is set and leveled, start the 2nd course by placing blocks in the opposite direction. Continue around the square.

6. Once the 2nd course is all lined up, carefully remove one block at a time and apply two thick beads of concrete adhesive to the center of the block. Reinstall the block and push down firmly. Continue for all remaining blocks on 2nd course.

7. Start the 3rd course by placing blocks in the same direction as the first course. Then, line up and glue the blocks as in step 6. Repeat for final 4th course by placing blocks in the same direction as the 2nd course. Line up and glue as directed in step 6.

8. Lower the fire pit liner inside the blocks. The outside flange of the liner should be centered and rest on the inside edge of wall block units.

9. After the adhesive cure time has lapsed, pour lava rock into the fire pit until the level reaches the bottom of the fire pit liner.
